Digital Technology To Improve Learning

This course is designed to support senior leaders and teachers to make better informed decisions based on the best available evidence we currently have. It includes a number of practical examples of technology being used in ways which support improved teaching (e.g., by increasing the accuracy of teacher assessment) or improve pupil learning (e.g., by increasing the quality and quantity of pupil practice).

To develop this course's four recommendations for using digital technology to improve pupils' learning we not only reviewed the best available international research, but also consulted with teachers and other experts.

- Consider how technology will improve teaching and learning before introducing it
- Technology can be used to improve the quality of explanations and modelling
- Technology offers ways to improve the impact of pupil practice
- Technology can play a role in improving assessment and feedback
